## Methodology

**ESG Quality Score** measures the ability of underlying holdings to manage key medium to long-term risks and opportunities arising from environmental, social, and governance factors. It is based on MSCI ESG Ratings and is measured on a scale of 0 to 10 (worst to best). The distribution of scores is based on the universe of approximately 28,000 funds included in MSCI ESG Fund Metrics.

**ESG Ratings Distribution** represents the percentage of a portfolio's market value coming from holdings classified as ESG Ratings Leaders (AAA and AA), Average (A, BBB, and BB), and Laggards (B and CCC).

**Carbon Risk** measures exposure to carbon intensive companies. It is based on MSCI Carbon Metrics and is calculated as the portfolio weighted average of issuer carbon intensity. At the issuer level, Carbon Intensity is the ratio of annual scope 1 and 2 carbon emissions to annual revenue. Carbon Risk is categorized as Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

**Carbon Emissions - Scope 1+2 intensity.** This figure represents the company's most recently reported or estimated Scope 1 + Scope 2 greenhouse gas emissions normalized by sales in USD (t/USD million sales), which allows for comparison between companies of different sizes.

**Climate Transition Score.** Measures how well a company is positioned to deal with the current and future challenges imposed by climate changes. Current carbon footprint, carbon targets and decarbonization progress are considered. All companies are scored on an absolute scale between 0 10, where 10 is the best.

**ESG Industry Leadership Score.** Measures how well a company is positioned to deal with the potential risks related to Environmental, Social and Governance issues. All companies are scored on an industry relative scale between 0 10, where 10 represents the leading company within an industry.

**UN SDG Score.** Measures how aligned a company is with the 17 UN Sustainable Development Goals (SDG). Measured e.g. by identifying revenue and R&D that can be attributed to products and services that can help solve some of the world's major social and environmental challenges. All companies are scored on an absolute scale between 0 10, where 10 is the best.
